Key Business Insights

1. Revenue Peak

November 2010 recorded the highest monthly net sales revenue at £1.40M, nearly 3.5x higher than December (£402K) — restocking and staffing should be planned ahead of November, not December.

2. Geographic Concentration

The UK contributes ~86% of net sales revenue. EIRE, while a small overall share, shows high per account concentration — just 3 real accounts average £108,467 each, roughly 53x the UK's per account average.

3. Customer Cancellation

Registered customers cancel significantly more often than Guests (18.54% vs 4.21%).

4. Order Value

Registered and Guest customers spend nearly the same per order (£457.31 vs £425.47) — the real behavioral difference is cancellation rate, not order size.

5. Top Products

The top 5 products account for 5.65% of total revenue — about 44x more concentrated than would be expected if revenue were spread evenly across all 4,144 products.
